Sanplatec Water purification bottle (Aquatoriton)

※**Caution**
Limited to use in drinking-water
that meets national water quality standards

■ specification

- ※Material/water purifier body: polypropylene, polyethylene, silicone rubber, cartridge: polypropylene, synthetic rubber
- ※Type of filter media: activated carbon, nonwoven fabric, titanium silicate
- ※Filtration flow rate: 0.1L/min
- ※Minimum amount of dynamic water that can be used: 0.01MPa
- ※Total filtration flow: 180 L
- ※Approximately 3 months (1 person) when 2L of filter medium is used per day.

■ Features

- Since the body is antimicrobial, it can be used safely at any time.
- Since no rubber packing is used between the main unit and the bottle, the structure is designed to suppress the generation of bacteria.
- By attaching the cartridge to the opposite side and performing a backflow wash, chlorine in tap water can sterilize and disinfect the cartridge to the inside.
- When the bottle is pushed back, it is structured so that air can be drawn in more easily.
- Since the bottle has a suspension structure, it has a reasonable push comfort.
- A filter developed jointly with a major activated carbon manufacturer uses a cartridge of the highest quality.
- Because it is a portable water purifier, tap water can be produced anytime and anywhere.
